UNITED NON STAINING BEARING OILS

United Oil Non-staining Bearing Oils are high quality lubricants formulated to provide the necessary levels of friction reduction and wear protection required in bearing applications. The products resist water wash off and have a long service life.

United Oil Bearing Oils are truly universal and can be used in applications that have historically required heavily compounded oils or straight oils. United Oil has developed these products using knowledge acquired from a long association with various metalworking operations.

United Oil Non-staining Bearing Oils are recommended for all total loss applications where the special properties of these oils are needed. They can be used for bearings, gears, slides and way applications
